

PROCESS FLOW CHART OF ROASTED GUAR GUM SPLITS & GUAR MEAL

PROCESS FLOW CHART OF ROASTED GUAR KORMA

Guar Meal is the by product obtained during processing of Guar Seeds [Cyamopsis Tetragonoloba] for splits.

The normal composition of seeds :

Guar Splits	28%
Guar Meals	68%
Waste Production Loss	4%
Total	100%

The ingredients of Guar Seeds:

Endosperm
Germ
Husk

The first one is Guar Splits and the last two are Guar Meals.

The Guar Meal is rich in Proteins and Carbohydrates and is 100% natural agricultural product. It is nutritional feed and can be used as fodder by itself or in addition to other feed. Some of the known advantages of processed Guar Meal [Fodder] are:

1. It is free from Salmonella, Aflatoxin & E. Coli, which often infects Cottonseed Meal.
2. Guar Meal can also be used as feed for Pig, Chicken and Duck.

100 % non GMO product.

It can be used as a binding agent for palletizing other feed compounds due to presence of Residual Gum.

The Guar Meals consist of

- (1) Guar Churi [Powder Like]
- (2) Guar Korma [Granular Type]
